### Definitions

SD	The standard deviation of an investment's returns is a measure of how much they can differ from its average return. It is a measure of risk and, as a result, volatility. Investors can use the standard deviation as a risk indicator to see how volatile their investments have been in the past. A higher standard deviation indicates that an investment is more variable or riskier.
SI	The Sharpe ratio is a tool that allows investors to compare the return on investment to the risk involved. This ratio is derived by subtracting the risk-free rate from the return of the portfolio and dividing the result by the investment's standard deviation.
TE	Tracking error is a financial performance metric that evaluates the difference between an investment portfolio's return variations and the return fluctuations of a set benchmark. Standard deviations are the most common way to measure return variability.
$\beta$	The volatility of a mutual fund in relation to its market benchmark is known as beta.
$\alpha$	For a given level of risk, alpha is the excess return over the market benchmark.
IR	The information ratio demonstrates the fund manager's consistency in providing superior risk adjusted performance.

**Disclaimer:** Past performance figures are not indicative of future performance. Potential investors should be aware that the price of units is subject to change and not guaranteed.

\* The top 10 holdings and the allocations are shown as of the beginning of the quarter.
