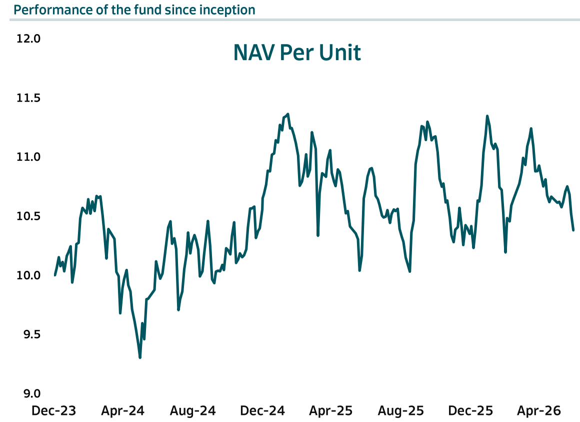
Performance of the fund since inception



The chart data are based on the holdings as of beginning of the period

The credit rating of the debt instruments for the top 10 investments of the fund

A statement of the credit rating of the debt instrument	N/A
A statement of the credit rating of the issuer of the debt instrument	N/A
A statement of the name of the credit rating agency issuing the credit rating	N/A
A statement of the date of the credit rating.	N/A
Unrated debt instruments	N/A

A statement on the fund's dividends distributed to the unitholders as at the end of the relevant quarter 30/06/2026

Total dividends distributed	N/A
Number of existing units for which distributions have been made	N/A
The value of the dividends distributed for each unit	N/A
The percentage of distribution from the fund's net asset value	N/A
Eligibility for cash dividends distributed	N/A

A description of formulas utilized for assessing performance and risk measures

Standard Deviation	Standard deviation is a statistic that measures the dispersion of a dataset relative to its mean. Its formula is calculated as the square root of the variance, which is based on the deviation of each data point from the mean. This is measured over each respective period and annualized based on the number of data points in a year.
Sharpe Ratio	The Sharp ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. Sharpe Ratio = (Fund's return - risk free) / Standard deviation.
Tracking Error	Tracking error is the divergence between the price behavior of the fund and its benchmark. Tracking error is calculated as a standard deviation of the difference between the fund return and that of the benchmark.
Beta	Beta is a measure of the volatility - or systematic risk - of the fund compared to the market. Beta is calculated as (Covariance of fund returns with that of the benchmark)/(Variance of benchmark returns).
Alpha	Alpha refers to excess returns earned on an investment above the benchmark return. Alpha may be positive or negative and is the result of active investing. Alpha = Funds Return - Benchmark return.
Information Ratio	Information Ratio (IR) is a risk-adjusted performance measure that evaluates how well the fund generates returns above a benchmark, considering the volatility of those excess returns. It is calculated by taking the difference between the fund and benchmark returns for the same period and then dividing it by the tracking error.
