Clearing House	Muqassa	
Currency	ﷲ	

Why Trade Derivatives?

Derivatives are a key tool for the entire trading community, They allow you to:

- Manage portfolio risk and hedge exposures in the Saudi equity market, whilst reducing counterparty risk via one Central Clearing House.
- A cost efficient and transparent Exchange traded product to express market view.
- Access leverage by posting a fraction of the contract’s notional value as margin, instead of funding 100% of the position as required in the cash equity market.
- Alleviate balance sheet utilization as listed derivatives is an off-balance sheet product.
- Implement portfolio strategies via relative value positioning, such as inter-market spreads. Embedded characteristics of derivatives allow for long or short positions, whilst removing the need to

- borrow to sell short.
- Caters for both institutional and retail participation, due to product standardization.

They are especially useful for all types of traders including:

- Asset managers managing volatility or downside risk
- Trading desks looking for efficient market exposure
- Family offices and institutions (e.g Treasuries) with Saudi equity holdings
- Proprietary trading firms
- Retail Traders

Recent Enhancements

The Saudi derivatives market has been rebuilt to support enhanced participation. Key improvements include:

Trading and clearing fees fully waived for the first year

Reduced Trading and Clearing fees (following first year waiver)

Increased Tick sizes of Single Stock Futures

Obligated market makers quoting throughout the trading session to provide consistent liquidity

Revised margin model, including cross-margining between MT30 and SSFs

How It Works: Step-by-Step Guide to Trading

01

Open a brokerage account

- You must have an account with a Saudi Exchange Derivatives Member that offers the product you want to trade.

02

Choose your contract

- Decide if you want to go long (expect price to rise) or short (expect price to fall) on the index or single stock(s).

03

Place your trade

- Trades are matched automatically and anonymously on the exchange. Prices reflect market expectations and market maker quotes.
- Initial Margin will be required by Muqassa to cover your exposure.
- Your broker might request additional margins based on your risk profile.

04

Manage position

- Positions are marked to market daily. Gains or losses are settled with your broker each day.
- Deposit margins when requested by your broker depending on your exposure and risk.

05

Close or hold to expiry

- You can close the position anytime on the Exchange before last trading date or hold until expiry, where it settles in cash based on final price.
